## **DETAILED ACTION**

### ***Allowable Subject Matter***

Claims 1-27 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: Although Ko (US PAT No. 5,852,370) teaches an integrated circuits for low power dissipation in signaling between different-voltage on chip regions, one of ordinary skill in the art would not have been motivated to modify the teaching of Ko to further includes, among other things, the specific of a method for amplifying capacitively coupled inter-chip communication signals and/or an apparatus comprising periodically initializing the input voltage of the first CMOS inverter stage involving suspending data transmission on the capacitive transmitter pad and setting the voltage on the capacitive transmitter pad to a middle point between a voltage representing logic "1" and a voltage representing logic "0" as set forth in claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Kinugawa et al. (US PAT No. 6,847,231) discloses an output circuit protecting from excessive current.

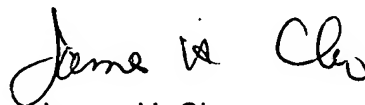

Art Unit: 2819

Stewart (US PAT No. 4,080,539) discloses a level shift circuit.
